## Research Interests

---

We believe the ultimate goal of inventing the computer is to augment our human selves. To achieve this, my group’s research focuses on the following three topics:

- **Intelligent User Interfaces:** how can we design interfaces of intelligent systems that augment a user to accomplish domain-specific tasks?
- **Sensing & Interaction Techniques:** how can we invent new sensors and devices that afford novel experiences for users to interact with a computer?
- **Computational Design & Fabrication:** how can we build computational platforms that empower users to realize their ideas into digital or physical artifacts?
